

# TECTONIC CATEGORY

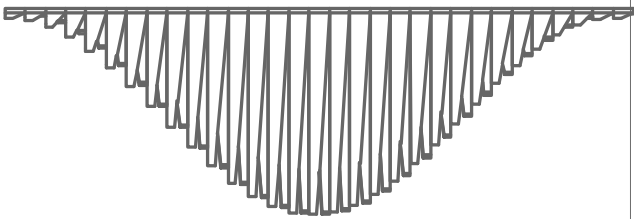

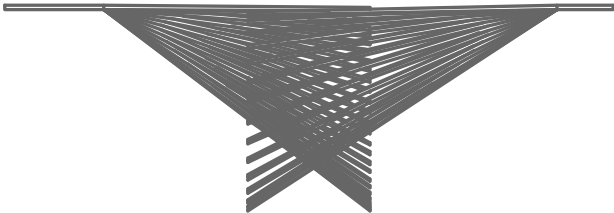

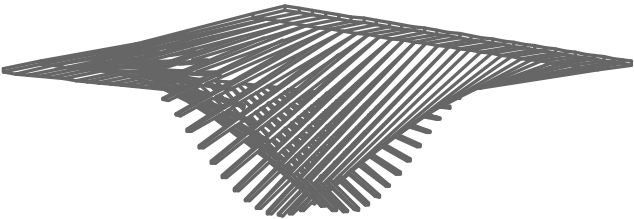

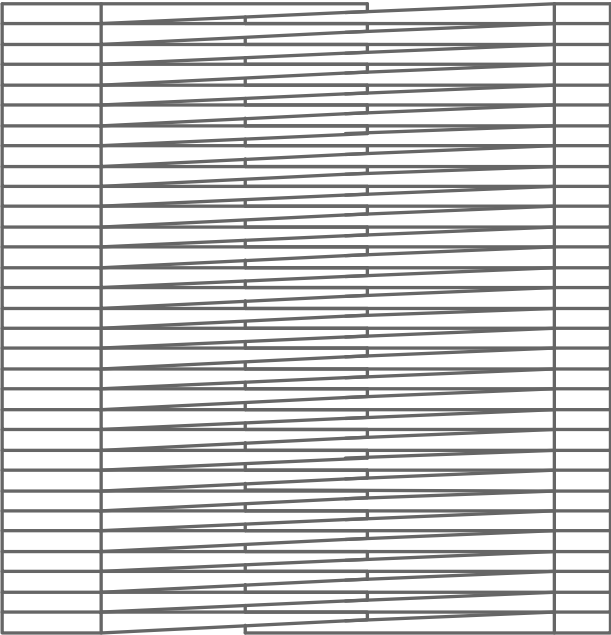

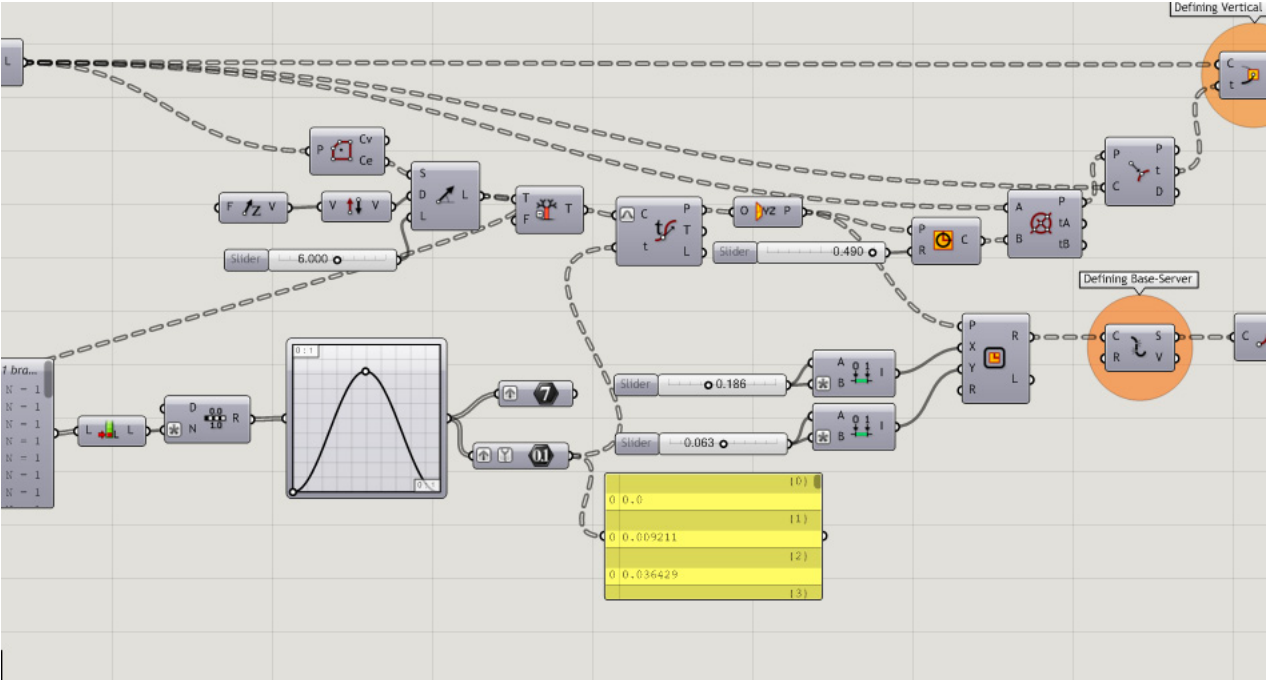

## DESIGN PERFORMANCE CRITERIA

This screen system is to act as a  
**Skylight** located just above  
the stairs to my bedroom loft. The design  
is driven by the rising sun which wakes  
me. The goal is to allow the sun to flicker  
through the louvers at different times of  
the year in an effort to still allow me to rise  
with the sun, yet to allow it to occur in a  
less harsh way.
